Rationale	Drawing is the language of engineers and technicians. Reading and interpreting engineering drawing is their day to day responsibility. The subject is aimed at developing basic graphic skills in the students so as to enable them to use these skills in preparation of engineering drawings, their reading and interpretation.
Learning Outcome (Practical)	**After undergoing the subject, the students will be able to:** • Identify and use of different grades of pencils and other drafting instruments which are used in engineering field. • Draw free hand sketches of various kinds of objects. • Utilize various types of lines used in engineering drawing. • Apply different dimensioning methods on drawing of objects. • Apply different types of scales and their utilization in reading and reproducing drawings of objects and maps. • Draw two-dimensional view of different objects viewed from different angles (orthographic views) • Draw and interpret complete inner hidden details of an object which are otherwise not visible in normal view • Prepare projections of Solid • Generate isometric (3D) drawing from different 2D (orthographic) views/sketches • Identify conventions for different engineering materials, symbols, sections of regular objects and general fittings used in Civil and Electrical household appliances.

Rationale	The main aim of this syllabus is to provide an opportunity for the learners to use English for different situations. Every chapter of the syllabus is based on reading text and a range of tasks and activities, designed to enable the learners to practice the different skills, sometimes individually and sometimes in pairs or groups. This syllabus is allowing grammar to be used in a more meaningful role in learning language. Thus, the students develop their language skills by practicing language activities and not merely knowing the rules of the language.
